

Tasks To Be Performed:

1. Setup Puppet master-slave using 3 nodes
2. Installing Apache on slaves using manifests

Tasks To Be Performed:

1. Add one more slave to the setup
 2. Add a condition, if Apache is already installed on the slaves, install NGINX
- The result should be 3rd slave with NGINX installed

Tasks To Be Performed:

1. Use the previous module's deployment
2. If Apache is installed change index.html to "apache is installed"
3. If NGINX is installed change index.html to "nginx is installed"

Tasks To Be Performed:

1. Use the previous module deployment
2. Use modules for this task
3. Ensure MySQL and Java is installed on NGINX machine

Tasks To Be Performed:

1. Use the previous assignment's deployment
2. Define hostnames for slaves, as slave1, slave2 and slave3
3. On slave1 create a file in/temp, which says this is slave1
4. On slave2 create a file in/temp, which says this is slave2
5. On slave3 create a file in/temp, which says this is slave3
